>kpc-3. Clipped a resistor to increase the output impedance. Had to set

Models of the 5100 produced, probably, within the last two years  
have the data port on the back connected directly to the modulator.

I just fed my KPC-3 into the mic' connector -- no resistors needed  
either -- just a straight connection.

>: 2) Can these be remotely controlled via DTMF? (Yes, I am

>Don't think so.

5100 does have the wireless mike but it's on 49-MHz and can cause baby monitors/cordless phones to broadcast on your rig! Apparently there is a "fix" by using the IR LED option on the remote control although I've read of problems with this.

>: 3) Are there any differences between these two other than  
>: the 5200 having dual in-band receive and 32 memories and  
>: the 5100 offering remote mounting and 94 memories? Do they  
>: take all of the same accessories?  
>  
>As far as I know, they take all of the same accessories. Internal mods  
>are different.

Correction. 5100 has dual in-band receive. I believe it can be had on the 5200 but not out of the box -- should require a mod.

Also, I don't believe that the DVS-3(?) (Digital Voice Synthesizer) will work on the 5100. PLEASE!!! correct me if I'm wrong on this!
